ABSTRACT:

An improved method and system for translating an optimization problem for use in efficient resource allocation. The improved method of the present invention includes the step of generating an index link record for each of the index variables in the optimization problem so as to eliminate the need for a symbol table and a plurality of temporary data records. The method also includes the step of linking the index link records of the index variables requiring expansion in a reverse order of the order listed in the optimization problem so as to reduce the number of traversals performed during expansion processing. The index link records have a pointer for identifying the next index variable requiring expansion.
